

Web Developer

We are recruiting a Front-End Web Developer to join our dynamic in-house IT Team.

Greenzone Technology

At Greenzone, technology is at the heart of everything we do. What sets us apart is our waste industry leading software which has been built from the ground up by our in-house software development team.

Greenzone's bespoke customer portal "Customerzone" allows our customers to manage their waste collections, view invoices, raise support tickets, sign waste transfer notes and more, all efficiently and simply from one place.

Other in-house products include desktop software, Supplierzone and Site Audit Android App.

Our current tech stack consists of two major components: a legacy fat client written in WPF and C# and a new cloud-based web solution using Vue.JS with Typescript

Why Greenzone?

An opportunity for personal growth in an innovative forward-thinking business that strives to make our communities better. We also offer:

- Competitive salary
- Hybrid working options
- Career development and annual personal training allowance
- Company Pension scheme and Life Insurance scheme
- 25 days holiday per year plus bank holidays
- Eatzone - our on-site subsidised canteen
- Cycle to work scheme and subsidised gym memberships
- Onsite car parking

About the Role

As one of our Front-End developers you will help maintain and build our new bespoke web-based CRM, which will involve you having an understanding of UI/UX principles and being able to bridge the gap between functionality and design. As part of a small team, you will be required to help with the decisions of the migration from the legacy system to the web and provide the end user with a functional and easy to use product.

This is an exciting role for a web developer that wants to be able to make a difference in a company that wants to evolve and be at the top of innovation

About You

You will:

- Knowledge of multiple front-end languages (Html/CSS Javascript, Typescript)
- Knowledge of and Javascript frameworks (Vue.js(typescript), ReactJs, Angular 4+)
- Excellent communication and teamwork skills
- Great problem-solving ability and organisational skills
- Degree in Computer science (or equivalent working experience)
- Experience using UI frameworks (e.g. Vuetify)
- Experience with 3rd party APIs (REST)

In addition, experience of delivering websites, OAuth, Azure ecosystem, cross platform development, databases/table structures, UI/UX, testing and writing and maintaining API's are desirable but not essential.
